

Custom Market Reports

AMC provides the entire spectrum of market research services from specific reports on markets, applications, technologies or products, to complex research projects covering many different topics requested by our individual customers.

Customized market intelligence reports can take many different forms, depending on the complexity of the project and the specific requirements of the customer.

More than 10 years in custom market research in markets and industries relevant for machine vision and optical technologies enables us to serve the needs of our customers.

Projects can be realized on top of existing market reports, by using our huge machine vision database and data that are provided by the customer. Our responsibility starts with the common definition of the project, the content and ends with the presentation of the results and the delivery of the report.

The experience and expertise of AMC and its partners enable real market intelligence reports on machine vision and automation that reflect a deep understanding of the business, the technologies, products, applications and customer needs.
