

# Market Intelligence Report Robot Vision

For the first time ever a comprehensive **Market Intelligence Report** on **Robot Vision** is made available.

**Robot Vision**, the optical technology to precisely determine a part's position and thus guide robots and other equipment, is the key to successful automation in almost all industries and applications, industrial and non- industrial.

The **MIR "Robot Vision"** provides an in-depth insight into industries and markets where Robot Vision and optical positioning is in use already or will be used in the future.
